

BADR AL-DEEN RASEA

FULL-STACK & MOBILE APP DEVELOPER | ERP SYSTEMS & AI-INTEGRATED PLATFORMS

Sana'a, Yemen | Badraldeenrasea@gmail.com | +967 773 421 179 | baderrasea.github.io/portfolio

PROFESSIONAL SUMMARY

Full-stack software and mobile developer with a strong computer science foundation and +2 years building production web, mobile, and ERP systems for real businesses. Delivers end-to-end platforms — from React Native mobile apps and React/Next.js front-ends to robust back-ends using NestJS/Node.js, Laravel/PHP, and Python/FastAPI — with a recent focus on enterprise ERP architecture, offline-first mobile POS systems, and AI-assisted customer experiences (natural-language, voice, and image-based product search). Comfortable owning a project from client requirements through deployment and ongoing support.

TECHNICAL SKILLS

Mobile React Native, Expo, offline-first apps (SQLite + sync engines)

Front-End React.js, Next.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, jQuery, Figma (UI/UX)

Back-End Laravel, PHP, Python, FastAPI, NestJS, Node.js

Databases & ORM MySQL, SQLite, Prisma ORM, database & system design (ERD, use-case diagrams)

APIs & Integration RESTful & GraphQL APIs, JSON/XML, third-party API integration, JWT & 2FA authentication

CMS & Platforms WordPress, Wix

Tools Git, GitHub, Electron (desktop apps), ESC/POS thermal printing & POS hardware

Other AI-assisted search & assistant integration, data entry & cleaning, fast and accurate typing

WORK EXPERIENCE

Software Developer — طريق الابتكار (Tareeq Al-Ibtikar)

2024 – Present

In-house developer for the company's e-commerce platform, qafelh.com.

qafelh.com — E-commerce Platform

- Built a high-level, dynamic product filtering and search system: search by image, by voice, and across multiple languages, with real-time dynamic filters controlled through an admin dashboard.
- Developed **Fazza**, an AI shopping assistant that helps customers place orders, search for products (including health products), and compare items to make faster purchase decisions.

Freelance Software, Web & Mobile Developer

July 2023 – Present

Independent developer delivering custom web, mobile, and ERP solutions for clients across e-commerce, engineering, education, construction, security, and retail.

ERP Systems

- Smart Retail & Supermarket POS ERP System** — designed and built a full cross-platform retail ERP: an offline-first React Native/Expo cashier POS (local SQLite database with automatic background sync), a Next.js + Electron admin dashboard, and a NestJS/Prisma/MySQL backend with JWT and 2FA authentication.
- Implemented an append-only stock ledger for auditable inventory (purchases, sales, returns, damage, transfers), dual unit/carton pricing, physical stocktake with automated variance reconciliation, customer credit/debt ledger, expense approval workflow, and granular role-based permissions.
- Factory Management ERP System** — built a full production & distribution ERP: a React/Vite web admin, an Electron desktop app, and an offline-first React Native/Expo app for field sales reps, on a NestJS (Fastify) + Prisma + MySQL backend.

- Automated production with a Bill-of-Materials (BOM) engine that validates raw-material stock and auto-deducts ingredients when a run starts, with automatic rollback on cancellation; tracked raw materials and finished goods through an append-only ledger for full audit history.
- Built real-time van-stock and cash-custody tracking for field reps (goods carried vs. sold vs. cash collected/remitted), backed by an offline-first sync engine — local outbox queue, temporary-ID resolution, and retry/dead-letter handling — so reps can invoice and collect payment with no signal.

Client Websites

- [ecec.sa](#) — official website for Ekhtibarat Engineering Consulting Company, showcasing their consulting services and engineering project portfolio to prospective clients.
- [yementr.com](#) — video chat platform for training and educational purposes in Yemen, enabling live remote classes and interactive sessions between instructors and students.
- [rasm-alkhaleej.com](#) — official website for Rasm Al-Khaleej Construction Company, presenting the firm's completed projects, services, and company profile to commercial clients.
- [wegotec.net](#) — smart download landing page for a Yemeni tech company, featuring automated device detection (Android/iOS) for seamless app distribution.
- [zone.sa](#) — online site for Zone Restaurant featuring menu browsing and offerings to support customer decisions before visiting.
- [msasia.com.my](#) — WordPress website for an education/training services company in Malaysia, presenting its study programs and services to prospective students.
- [oeilvigilant.com](#) — WordPress website for a private security & guarding company in France, built multilingual (French/English/Arabic) to present its guarding and surveillance services across markets.
- [yemeni-market.com](#) — multilingual e-commerce store offering an online shopping experience for authentic Yemeni products.
- + Various other freelance editing & creating web and mobile projects

Core Responsibilities

- Designed and developed responsive, production web and mobile applications from client requirements through deployment.
- Integrated REST and GraphQL APIs and third-party services to extend application functionality.
- Tested, debugged, and maintained live systems, optimizing performance and reliability.
- Provided ongoing client support, training, and website/application management.

EDUCATION

Bachelor's Degree in Computer Science — Al-Razi University, 2019 – 2023

TOEFL (PBT) — Canadian Center, 2017 – 2019

High School — Khalid bin Al-Waleed School, 2014 – 2016

LANGUAGES

Arabic Native

English Advanced (TOEFL)

PERSONAL SKILLS

- Strong problem-solving skills and ability to find appropriate solutions.
- Highly committed to deadlines, appointments, and timely delivery.
